Graduates' Profile 2011

Survey 2012

Methodological Notes

Con il sostegno del:

MINISTERO DELL'ISTRUZIONE, DELL'UNIVERSITÀ E DELLA RICERCA

Methodological Notes

The **2011 Graduate Profile** is based on the combination of the following sets of data:

- administrative records of the 61 universities which became members of the AlmaLaurea before 2011;
- replies to the questionnaires AlmaLaurea administered.

Graduates from the following universities were surveyed: Bari; Bari, Polytechnic; Basilicata; Bologna; Bolzano; Cagliari; Calabria; Camerino; Cassino; Catania; Catanzaro; Chieti and Pescara; Ferrara; Florence; Foggia; Genoa; Insubria; L'Aquila; LIUC Castellanza; LUM Casamassima; Marche Politecnica; Messina; Milan, IULM; Milan, San Raffaele; Modena and Reggio Emilia; Molise; Naples, L'Orientale; Naples, Federico II; Naples, Parthenope; Naples, Seconda Università; Padua; Parma; Perugia; Perugia Foreigners; Eastern Piedmont; Reggio Calabria Mediterranea; Rome, Campus Bio-Medico; Rome, Foro Italico; Rome, La Sapienza; Rome, LUMSA; Rome, San Pio V; Rome, Tre; Salento; Salerno; Sannio; Sassari; Scienze Gastronomiche; Siena; Siena Foreigners; Teramo; Turin; Turin, Polytechnic; Trento; Trieste; Udine; Urbino; Valle d'Aosta; Venice, Ca' Foscari; Venice, IUAV; Verona and Viterbo Tuscia.

The Report analyses degree holders of post-reform university programmes (that were implemented by the Ministerial Decrees 509/99 and 270/04) and pre-reform degree holders.

Type of Degree Programme	Number of graduates surveyed in <i>2011 Profile</i>
FIRST LEVEL OR THREE YEAR DEGREES (post-reform)	121,065
SINGLE-CYCLE SPECIALIST (OR MASTER'S) DEGREES (post-reform)	19,367
MASTER'S (OR SECOND LEVEL) DEGREE (post-reform)	62,482
NON-REFORMED DEGREE PROGRAMME (SCIENCES OF PRIMARY EDUCATION)	3,558
PRE-REFORM DEGREES	9,053
TOTAL	215,525

Some categories of graduates were excluded from the population analysed in the 2011 Profile since they gained their university qualification as a result of special arrangements. They amount to 3,457 graduates divided as follows: half of them are healthcare workers, whose professional experience was accredited by the University to the purpose of a three-year degree in the healthcare subject area; the second half includes members of the Law Enforcement Agencies and Armed Forces, public officials, and other categories of students who completed one of the programmes that had been specifically designed for them. What is more, often these graduates do not complete the AlmaLaurea questionnaire.

Sources and reference populations

The documentation analysed here takes into account the following groups:

- **all** degree holders (215,525), in terms of ***Personal Details, Secondary School Performances, Academic Performances at University*** (with the exception of *previous university experiences* and *motivations for choosing a degree programme*). The sources for this information are universities' administrative records, except for information concerning *place of residence* and *high-school leaving certificate* (administrative records were integrated with data collected through AlmaLaurea questionnaires, when available), and for *high-school grades* (when grades were missing in the university records they were retrieved through the questionnaire);
- all degree holders **who filled and returned the questionnaire** (199,499, that is 92.5% of the target population), as regards the sections ***Study Situation, Working Activities during University Studies,***

Assessment of University Experience, Foreign Languages and IT skills, Further Education Prospects, Employment Prospects and for previous university experiences and motivations for choosing a degree programme (Academic Performances at University section).

The 2011 Graduate Profile Report

The 2011 Graduate Profile Report is available in digital format and also on paper (download the printed volume from the www.almalaurea.it/universita/profilo/profilo2011/ website under PDF Documentation).

The on-line version can be viewed at the Internet address www.almalaurea.it/universita/profilo. It includes relevant documents for all graduate groups, which can be identified by **degree programme type, university, faculty, degree subject grouping, degree-programme grouping** (for post-reform graduates) and **programme type** (both for pre-reform and post-reform graduates).

The *Graduate Profile* shows data for groups including at least five graduates.

Return rate of questionnaires

The overall number of graduates and the number of those who filled the questionnaire are reported in each table and can be viewed in the Profile. The overall return rate was 92.5% in 2011. Whenever the graduates who filled the questionnaire are less than 60% of the overall number, a note will appear inviting users to be especially careful in the interpretation of the documentation gathered from the questionnaires.

Graduates whose questionnaires present the following limits were omitted from the 2011 Profile analyses:

- insufficient degree of completion: the questionnaires were empty or too few questions were answered;
- inconsistency: graduates supplied contradictory answers;
- implausibility: in batteries containing multiple questions sharing the sample response format, graduates repeatedly used the same response category (e.g., "definitely yes") for each item;
- excessive haste: graduates completed the questionnaire too quickly (less than 4 seconds, on average, per question) to guarantee reliable responses;.

The criteria and techniques employed to identify inadequate questionnaires are described in greater detail in the report "The AlmaLaurea questionnaire for graduates: completion indices and quality", drafted by Simona Rosa (AlmaLaurea), who developed and implemented the relevant analyses.

The "not specified" category, percentage values and absolute values

The *Graduate Profile* includes the percentage distribution of graduate groups for each variable. For the sake of clarity, the percentage related to the "not specified" (or "not available") category, which are usually quite low, are not been reported in the tables. Consequently, the sum of visible percentages may be less than 100.

In the printable version of the 2011 Profile (the actual book or a PDF version of the Profile to be downloaded from the Internet at www.almalaurea.it/universita/profilo/profilo2011/), you find that percentages lower than 3% or relating to the "not-specified"/"not-available" type of reply have not been reported in the charts.

Empty cells

Empty cells in the tables, which are identified by the symbol "-", mean that the corresponding number of graduates is zero (in terms of percentage) or that the phenomenon has no valid cases (if the cell is supposed to display average values). Consequently, the percentage value "0.0" indicates that they are valid cases, but with a percentage that is lower than 0.05. All values are represented with only one decimal figure.

Reference to the notes

For the definition of the following variables, the tables refer to the methodological notes.

- The **average age at graduation** is calculated not only on the basis of the actual age in whole years but also by taking into account specific birth and graduation dates. For the percentage distributions by age at graduation, the age is to be intended as fully achieved.
- The figure indicating **foreign citizens** does not include graduates from the Republic of San Marino.
- As for the graduates' **social background**, we have the framework proposed by A. Cobalti and A. Schizzerotto in their book (*La mobilità sociale in Italia*, Bologna, il Mulino, 1994). Social class is defined by the socio-economic status of the graduate's father and mother and corresponds to the highest of the two (principle of 'dominance'). Socio-economic status can be defined as *upper-class*, *employed middle class*, *petty bourgeoisie* and *working class*. The upper class is dominant over the other three, the working class is at the lowest level, while employed middle class and petty bourgeoisie are substantially balanced. If one graduate's

parent belongs to the petty bourgeoisie and the other to the clerical middle class, the social class of the degree holder is that of the father (in a situation like the above described one, it would not be possible to choose between the two social classes on the basis of the principle of dominance).

- Socio-economic status of each parent is a function of the most recent job position, as illustrated in the following table.

last job position	socio-economic status
<ul style="list-style-type: none"> • liberal professionals * • high level managers • entrepreneurs with at least 15 employees 	upper-class
<ul style="list-style-type: none"> • employees with coordinating duties • white collar employees • middle managers 	employed middle class
<ul style="list-style-type: none"> • self-employed • assistants in family business • members of cooperatives • entrepreneurs with less than 15 employees 	petty bourgeoisie
<ul style="list-style-type: none"> • manual workers, subordinates, etc. • low-level office workers 	working class

* Liberal professionals with a lower educational qualification than the secondary school-leaving certificate have been included in the *self-employed people* category.

Graduates whose mother (or father) is a house-keeper belong to the social class of the working parent (either father or mother).

• The **high-school graduation grade** (tables report average values) is calculated for qualifications earned in Italy and graded on a scale from 1 to 100, also for students who finished school before 1999 and where graded on a scale from 1 to 60.

- As regards **Area of upper secondary diploma**, the categories “In the South, but degree earned in the North or Central Italy”, “in Central Italy, but degree earned in the North or the South” and “in the North, but degree earned in the South or Central Italy” do not include individuals who earned their upper secondary diploma in a province that borders on the province where they earned their university degrees.

- In the question about **previous university experiences**, master’s degree holders are asked to identify the educational credential that gave them access to the master’s degree programme.

- The variable **major motivations for choosing the type of degree programme** is a summary of the replies given to the two following questions.

When you decided to enrol at the university degree programme you are about to complete now, which of the following motivations influenced you more?

Interest in the programme curriculum (mainly cultural factors)

- Definitely yes
- More yes than no
- More no than yes
- Definitely not

Interest in the job opportunities the programme provides for (mainly employment factors)

- Definitely yes
- More yes than no
- More no than yes
- Definitely not

The degree holders who chose their programme being driven by both cultural and employment factors replied “Definitely yes” to both questions. The graduates who were motivated mainly by cultural factors replied “Definitely yes” only to the question about their interest in the programme curricular teachings. Similarly, the

graduates who were motivated mainly by employment factors replied "Definitely yes" only to the question about their interest in the job opportunities provided for by the programme. Finally, the type of reply "neither these nor those" includes students who replied other than "Definitely yes" to both questions.

- Degree holders with **standard enrolment age** are defined as those who entered the university when they were 19. For instance, a student who was born in 1985 (or later) and enrolled in a first-level or a single-cycle degree programme in 2004/05 is to be considered having the standard enrolment age. For **master's degree programmes**, the standard age at enrolment has been set at 22 (on the assumption of totally regular educational careers both in secondary school and at university).
- As for the **individual examination grades**, both 30/30 and 30/30 with distinction have the same value (30).
- The **degree grade** is expressed on a scale from 1 to 110 even for pre-reform graduates of the Faculty of Engineering of the University of Bologna (where grades were expressed on a scale from 1 to 100). The highest grade, 110 with distinction, has been set equal to 113 for the purposes of calculating averages.
- **Time-to-graduation** is to be referred to programmes completed in 2011 for master's degrees only the two years pertaining to the master's programme alone are taken into consideration.

- The **duration of university studies** of each degree holder is given by the time interval between the conventional date of November 5th of the enrolment year and the graduation year. For master's degree programmes, the time interval is calculated between November 5th of the enrolment year for the two-year final programme and the graduation date.

- **Delay in graduation** of a degree holder is the extra time necessary to complete the programme beyond its prescribed duration (for master's degree programmes, it is the extra time needed beyond two years), and it takes into account the number of months and days passed between the completion of the university year (April 30th) and the graduation date.

- The **delay in graduation index** is the ratio between graduation delay time and prescribed duration of the degree programme.

- **Student-workers** are degree holders who state they had a full time job for at least half of their university career, regardless of their overlap with classes. **Working students** are degree holders who had some work experiences during their university studies.

- The possible answers to the question "**Would you enrol on the university again?**" depend on the type of programme that has been completed.

First-level degree holders, single-cycle and pre-reform specialist degree holders

If you could go back in time, would you enrol on university again?

- *yes, in the same degree programme at the same university*
- *yes, in a different degree programme at the same university*

- *yes, on the same degree programme at another university*
- *yes, but on a different degree programme at another university*
- *no, I would not enrol again at any university.*

Master's degree holders

If you could go back in time, would you enrol on university again?

- *yes, in the same degree programme at the same university*
- *yes, in a different degree programme at the same university*
- *yes, in the same degree programme at another university*
- *yes, but in a different degree programme at another university*
- *no, I would not enrol again at any university.*

Other special classification patterns

Place of residence is broken down into the following categories:

- Same province of the attended university;
- Other province of the same region;
- Different region;
- Abroad.

This classification takes into account the province in which teaching activities are based, regardless of the province in which the university has its main headquarters.

- As for the variable **educational qualification of degree holders' parents**, the parent with the higher qualification was taken into account and a distinction was made between situations where both parents, or only one, is a university graduate.

- Degree holders who have at least a "good" **knowledge of foreign languages** "native speakers", or claim to have a "very good" or "good" level of knowledge within a range of entries including also "fairly good", "limited" and "no knowledge at all" (both in writing and speaking).

- Among degree holders who have at least a “good” **IT skills**, many of them replied that they have a “very good” or “good” skills within a range of entries including also “fairly good”, “limited” and “no skills at all”.
- The Min. Decree (MD) 270/04 reorganised the degree programme groups, which had been introduced by the Min. Decree 509/99, and it also matched the new degree-programme groups (MD 270) with the old ones (MD 509). The two types of postgraduate degrees were divided into “single-cycle specialist degree programmes” and “master’s degrees”, and they were changed names. The post-reform 2009 graduates belong mostly (more than 97%) to MD 509 programmes. In the Graduate Profile Report, the distinction between graduates under the MD 509 and MD 270 programmes will not be taken into account.
